

REPLICATION FILES

for

The Transmission of Monetary Policy Shocks

Silvia Miranda-Agrippino
Bank of England, CEPR and CfM(LSE)

Giovanni Ricco
University of Warwick, CEPR and OFCE – SciencesPo

1. DATA

Details on data sources are reported in the Data section of the Online Appendix.

The code is set up to replicate all tables and figures in the paper, however, restricted-access data have been removed (set to #N/A). Users that have independent access to such data (e.g. Consensus Economics, or the S&P 500) can replicate the full set of figures following these steps:

- a. Copy the data in the relevant tabs in **REPLICATION FILES – PUBLIC/DATA/Miranda-Agrippino&Ricco_ALLDATA.xlsx**
- b. Run **REPLICATION FILES – PUBLIC/DATA/BUILD_data.m** to update the mat data files
- c. Run the replication code for the desired figure

2. FIGURES

All replication files are in **REPLICATION FILES – PUBLIC/**

Dedicated MatLab codes are provided to replicate each figure in the paper. The code has been tested on MatLab 2014b.

Figure 1 is a text diagram which does not require replication files.

Replication of Figures 6, 7, 8 and 9 requires restricted-access data.

Replication of Figures E.1, E.2, E.3 and E.4 requires restricted-access data.

The code that replicates Figure 7 can take a few hours to run depending on the processing capacity of the hardware available.

3. TABLES

All replication files are in **REPLICATION FILES – PUBLIC/REPLICATE TABLES/**

Tables 4 and 5 are replicated via MatLab files (**Replicate_Table4.m**
Replicate_Table5.m)

All remaining tables are produced by Stata (code tested on Stata 13).
The replication code is **REPLICATION FILES – PUBLIC/REPLICATE TABLES/Replicate Stata Tables/MAIN_Replicate_Tables.do**
NOTE: Users need to change the directory in which the files are located at line 20.
